

Instruction for GOMOKU Submission

1. Download python template for Piskvork

You can download it from this website:

<https://github.com/stranskyjan/pbrain-pyrandom>

example.py provide a simple random agent. Read this example to get familiar with the procedure of how to construct your own agent.

2. Install the Pyinstaller

Pyinstaller is a python package for compiling the python script to an executable file: exe.

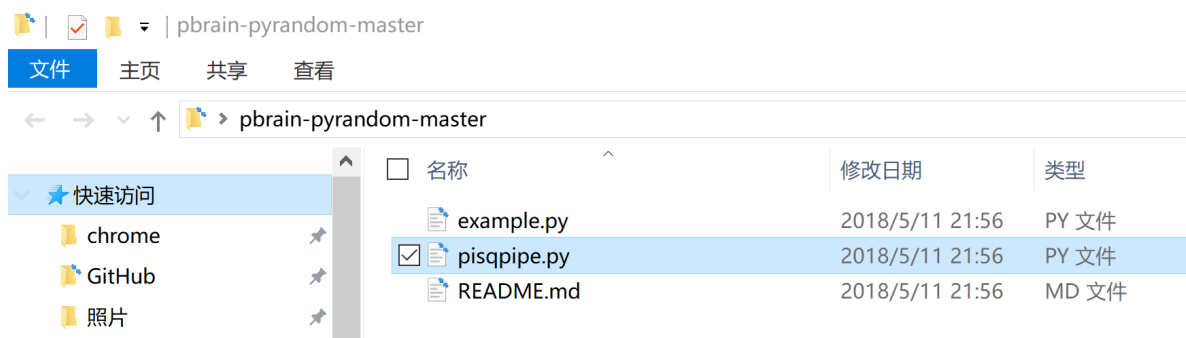

Open a terminal, install it through pip

```
pip install pyinstaller
```

3. Compile your script to an executable file

Open the corresponding directory (where your python scripts exist):

Open a terminal under this directory:

```
C:\Windows\System32\cmd.exe
Microsoft Windows [版本 10.0.17763.864]
(c) 2018 Microsoft Corporation。保留所有权利。

C:\Users\11029\Desktop\pbrain-pyrandom-master>
```

Use the following command line command:

```
pyinstaller example.py pispipeline.py --name pbrain-pyrandom.exe --onefile
```

PS:

1. Replace the *example.py* with your own script
2. The output name should strictly follow the format *pbrain-XXX.exe*
3. Remember not to generate any log in your program before you compile

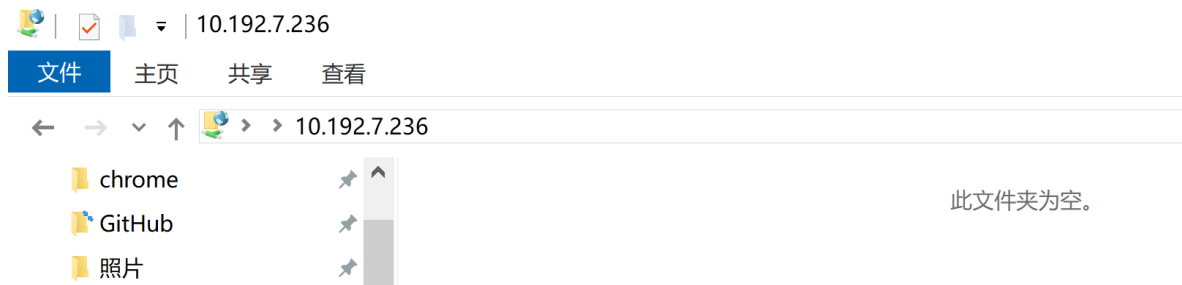

4. Submission

Zip your exe file to a zip file with your student number as the file name. eg. 16307100046.zip

PS: Provide only one student number for each group in the file name

PS: Only zip files are accepted, your team will lose 1 point if you submit any other formats.

Open the ftp folder in your file browser *ftp://10.192.7.236/*

Drag your zip file into this folder. Subr

Warning: Each group can only submit once in one day

If your submission is successful, the competition result will be sent to your student email in about 1 hour.

If you did not receive the email for a long time, please contact TA Zejun Li, Jiwen Zhang or Xiaofeng He by email or Wechat.
